1. Set up (once)
create-next-app
--no-src-dir, Tailwind v4
npm install
packages pinned
.env + .env.example
Firebase key, optional local
Postgres URL,
SYNC_TOKEN
prisma migrate dev
prisma generate
2. Build in layers
lib/schemas
one file per concern
lib/server
env, db, firestore,
errors, methods, validate
lib/server/repo
postgres, firestore,
dual, facade, files, sync
lib/server/routes + app.ts
+ app/api route
lib/fetch.ts + patterns
+ components + pages
3. Check after every layer
prettier --check
tsc --noEmit
eslint .
npm run build
curl API checks
405, 404, 400, 201
(a failure sends you back
to the layer that caused it)
all pass
4. Run and try it
npm run dev
create form, open link,
submit, read responses
sync status
both databases equal
